In the specification

In the specification, at filed page 25, delete the paragraph at lines 16 to 29 (published paragraph 101) and insert the following in its place.

The communication links between the host CPU (82) and the FC-AL analyser (70) via the SES processor (7) allows the FC-AL analyser (70) to be programmed by the user to measure particular analytical variables relating to the performance of the FC-AL. Such user-configurable data acquisition is enabled by software, running on the host CPU (82) ~~(for example Vision, further details available at http://www.eurologie.ie/products/vision.htm)~~, which packets the configuration requirements of the user into a form that can be interpreted by the SES processor (7) (e.g. configuration pages). On receiving this information the SES processor (7) determines the appropriate destination for the configuration commands and transmits it to the destination in the appropriate form.
